USE CASE SPECIFICATION

Process Sales Checkout

Pharmacy Expiry & Re-order Dispatch Engine

Use Case ID	UC-01	**Primary Actor**	Pharmacy Clerk
Goal	Dispense the requested medicine using FEFO and record the sale.	**Trigger**	A customer requests a medicine at checkout.

Preconditions & Postconditions

Preconditions	Postconditions
• The Pharmacy Clerk is authenticated and signed in to the active checkout terminal. • Inventory records contain current stock quantities and batch expiry dates.	• The dispensed quantity is deducted from the selected batch's inventory record. • The sale is finalized and stored in the system logs.

Main Success Scenario

1	The Pharmacy Clerk starts a new checkout and enters the medicine name or scans its barcode.
2	The system searches the inventory database for available, active stock.
3	The system applies FEFO (First-Expired-First-Out) and selects the valid batch with the nearest expiry date.
4	The system displays the selected batch number and asks the clerk to retrieve that batch.
5	The clerk retrieves the medicine and confirms the batch on the checkout terminal.
6	The system deducts the requested quantity from the confirmed batch's stock count.
7	The system completes the sale, records the transaction, and generates a dispensing label.

Alternative Flow — Batch Expired or Damaged

Branch	System / Actor action
4a	The clerk finds that the FEFO-selected batch is expired or physically damaged on the shelf.
4a.1	The clerk chooses **Mark Damaged/Expired** for that batch on the checkout prompt.
4a.2	The system removes the batch from active, sellable inventory.
4a.3	The system reapplies FEFO and identifies the next-oldest valid batch.
4a.4	The system prompts the clerk to retrieve the replacement batch; the process continues at Step 5.
